ABOUT US

Reliable, functional design, technical performance, versatility, durable, maintenance convenience; they are the product development obsessions of MILUX. With more than 30 years in producing lighting products, our production team has assimilated their experience and innovation technology to lead the market in aesthetics as well as performance at internationally recognised standards.

In order to guarantee the highest quality level from raw material to final stage inspection, our quality control system plays an important role in our production process. In addition to the propriety product from our collection, the production team also has the capability to customise and develop client's original design to a certified product. MILUX is an obvious solution to cater for your wide range of applications with a competitive price range in the market.

OEM & ODM Services

Milux employs a dedicated OEM and ODM team of experienced engineers and designers to create luminaires to your specification. Our expertise ensures your designs meet with industry standards and maintain high levels of quality and finish. We oversee every step of the process from design, manufacturing to after sales customer service and offers the safest, most reliable and cost effective LED solution.

What

is matter ?

Matter is a smart home standard designed to unify the fragmented market of smart devices. It creates a common language for these devices, allowing them to work seamlessly together across different systems. Matter is an innovative standard designed to enhance smart homes and improve interoperability among various devices.

Interoperability

Interoperability Across Ecosystems:

- Matter allows different smart homes (such as Apple HomeKit, Google Home, and Amazon Alexa) to communicate seamlessly.
- You can mix and match devices from various brands without compatibility issues.

Flexible Device Compatibility:

- Suppose you switch from one smartphone brand to another (e.g. Samsung to iPhone). Matter ensures that your smart devices remain usable regardless of your phone choice.
- Matter-compatible devices work with Android, iOS, and other platforms.

Stability and Reliability:

- Matter supports connection methods like Wi-Fi, Thread, and Ethernet.
- It ensures faster, more responsive, and stable connections for your smart home devices.

Enhanced Security:

- Matter operates locally on your device, reducing external hacking risks.
- It adheres to consistent security protocols, ensuring high safety standards for all Matter devices.

Certified Manufacturers:

- Major brands like Amazon, Apple, Google, Samsung, and Zigbee Alliance support Matter.
- Other manufacturers, including Eve, Meross, and Linkind, have also joined the Matter ecosystem.

Future-Proofing Your Smart Home:

- Matter simplifies integration and is expected to become more widespread.
- If you're building a smart home, Matter is a promising standard to consider.

Matter acts as a bridge, allowing your smart devices to converse fluently across different systems. Whether you're upgrading existing devices or purchasing new ones, Matter offers a reliable and secure solution for your smart home needs!

Modular Innovative Lighting Solutions

The Milux latest product range embraces the modularised concept, reflecting the market trends towards flexibility and customisation.

The adaptive Curvity offers customisable curves, angles, and widths, while the high performing ClearView and PureView maximise office brightness with anti-glare covers for exceptional vision comfort. Freeplus 8° LED Modules provides precise spotlighting, and Freeplus RGBCW modules offers tunable colours for various environments, enhancing mood and health. These new additions will ensure the already flexible Freeplus family becomes even more comprehensive. This catalogue showcases our commitment to versatile, easy-to-install, and maintainable lighting solutions, allowing for creative and adaptable applications across diverse settings.

By integrating modularity, we cater to the growing demand for personalised and efficient lighting, ensuring that each product can be seamlessly interchanged and adapted to meet specific needs, fostering innovation and creativity in lighting design.

CURVITY

Extensive Modular Configuration

Our Curvity modular system features an extensive range of curves with radius starts from 250mm up to 450mm, curve angle from 30° to 90°, and width from 60mm to 200mm. With the aid of straight profile ranged from 300mm to 3000mm, your creativity will see no boundary. Length could be custom made to achieve different imagination.

Multi-Directional Light

The powerful pendant profile supports both up and downlight to provide ample lumen in your interiors. Surface mount version is also available for a wide range of applications.

Easy Maintenance Mechanism (Front Panel Access)

Installation and maintenance have not been easier. A newly developed front diffuser removal and easy connecting mechanism.

AND

Multi-Directional Light

ClearView and PureView are our most powerful profile with best visual comfort to date, and up and downlight to provide ample lumen to your space.

Unparalleled Visual Comfort

The unique anti-glare diffuser combination ensures low UGR while maintaining a high lumen output. With the various diffuser options, the possibilities are endless with ClearView and PureView.

Easy Maintenance Mechanism (Front Panel Access)

Installation and maintenance have not been easier. A newly developed front diffuser removal and easy connecting mechanism allows individuals to service the lamp without the need to uninstall the light.

FREEPLUS

LED
MODULE
REPLACEMENT
SYSTEM

FreePlus LED module is compatible with 13 series in the Milux Collection. The FreePlus modules also offer a wide range of options on CCT, CRI, LED Technology, Beam Angle and Efficacy.

The FreePlus LED module is a complete solution to any project type that needs to satisfy a wide range of parameters, whilst providing flexibility to replace the LED module for maintenance.

- **Full spectrum**
- **8°**
- **RGBCW**

*“Module transformed,
Lighting your way.”*

FULL

SPECTRUM

Full spectrum LED lighting is designed to replicate natural daylight and has numerous benefits. It can improve human health, enhance color perception, and promote plant growth. Full spectrum lights are often used to supplement natural daylight, helping you feel better, see better, and grow better.

The spectrum of full spectrum LED lamps simulates sunlight and can be adjusted to match the light intensity and color temperature of different times of the day and seasons. This allows them to cater to the growth patterns of organisms.

FULL

SPECTRUM

How does Full spectrum LED lighting AFFECT SLEEP?

Full spectrum LED lighting can have a significant impact on sleep quality. Light plays a central role in regulating the body's internal clock, known as the circadian rhythm, which signals when to be alert and when to rest. Exposure to natural light helps keep the circadian rhythm synchronized with sunrise and sunset, promoting wakefulness during the day and sleep at night. However, artificial light sources, including full spectrum LED lights, can disrupt this natural rhythm.

The production of melatonin, an essential sleep-promoting hormone, is closely tied to light exposure. In response to darkness, the pineal gland in the brain initiates melatonin production, which promotes drowsiness and facilitates sleep. Conversely, exposure to light, especially blue light emitted by LEDs, can suppress melatonin secretion and interfere with sleep. This can negatively affect your ability to fall asleep, remain asleep, and sleep for an extended period of time.

On the other hand, full spectrum light therapy has been found to have positive effects on sleep. Researchers have observed that full spectrum light therapy improves morning alertness, decreases the need for daytime sleep, increases sleep time during the night, and enhances overall sleep duration. These benefits contribute to a longer and deeper night's rest.

In summary, while exposure to natural light is beneficial for maintaining a healthy sleep-wake cycle, excessive or poorly timed artificial light exposure can disrupt circadian rhythms and melatonin production. However, full spectrum light therapy has shown promising results in improving sleep quality.

Non-Image Forming Brain Pathways

Blue light penetrates our eyes and signals a specific set of photoreceptors present in the retinal epithelium, called ipRGCs (intrinsically photosensitive Retinal Ganglion Cells). They are one of three types of photoreceptors in the retina, along with rods and cones. Rods and cones are the main image forming receptors.

Our Freeplus 8° is the latest addition to our Freeplus family and it provides excellent narrow spotlight onto the target. Combined with COB up to 10W power output and our Freeplus compatible luminaires, Freeplus 8° completes the family as one of our most flexible products to date.

RGBCW

Research indicates colour plays an important role in affecting our mood and health. Blue light suppresses levels of melatonin, helping us stay awake and alert, while red light increases levels of melatonin, helping our bodies get ready for bed.

Our modules with RGBCW chips can be used in various application in household, office, shops, malls, and hospitals. The colour and colour temperature can be adjusted easily accordingly in connection with a control system.
